

**Abstract****Polyoxymethylene copolymers, their preparation and use**

5 Copolymers are described containing blocks of the structural repeat units of the formula I and blocks containing structural units of the formula II

10 where  $R^1$  is a divalent radical derived from a hydroxy-terminated aliphatic or cycloaliphatic oligomer or polymer which, where appropriate, has ether groups and/or carbonyloxy groups in the chain, and  $x$  is a whole number, at least 10.

15 The copolymers may be used for producing moldings.
